SUBJECT: Steering U/J Pinch Bolt

If during the life of a Dennis Elite the steering column U/J, bevel box, steering box or inter shaft require changing, you must ensure that the U/J pinch bolt is changed at the same time.

The replacement nut and bolt must be of a 10.9 grade, and torqued to 50Nm. This torque should then be checked during the routine six weekly maintenance checks.

Steering column U/J pinch bolts

Steering box to bevel box inter shaft U/J pinch bolts

Failure to change, torque and recheck the fixings could affect the steering performance of the vehicle.
